

OSDHACK 2022

odc

Who Are We?

The Open Source Developers Community is an initiative by the students of JIIT to promote open source culture. The hub is all about contributing to and collaborating on projects, networking, learning together and guiding each other.

A community of web developers, android freaks, machine learning enthusiasts, hackers, designers, game developers and most significantly, EXPLORERS.

Activities

*Here at OSDC, we are driven towards **promoting Open Source** far and wide, in an effort to enhance learning in a much more creative way through community projects, workshops, talks and now even conferences!*

Team

A team of 24 highly motivated individuals with a passion for F/OSS and everything around it. Our team is constantly expanding every year as we look to achieve bigger goals.

We welcome those who believe in the open source philosophy and are willing to sacrifice their naps in order to change the world. We believe in propagating our message in a fun and practical manner.

We love to have frequent late night conversations on tech stuff and building new things.

Event Overview

About

OSDHack 2022 is a nationwide open hackathon being organised by the Open Source Developers Community of JIIT, Noida. It is a 48-hour long congregation of like-minded hackers and tech-enthusiasts where participants will brainstorm and build on their idea.

Open Themed

We don't believe in the confinements of a theme or tech stack in order to hack for a hackathon. The projects can be about any relevant issue (excluding hardware projects) under the sun with no restriction on tools/technologies to be used.

More than just a Hackathon

- Talks delivered by prominent speakers from academia and the Open Source community.
- A showcase of a variety of Open Source projects in an attempt to connect contributors to projects that they're interested in, and do our part in growing the Open Source Community.
- Specially organized ice-breaking events for participants to get to know each other while making connections.

**“our
past
events ,”**

OSDCONF

OSDConf, a two-day conference, focused on Open Source Development, advancements in the tech space and sharing knowledge between peers. Multiple speakers from the industry presented talks and demonstrations on a wide variety of topics.

OSDHACK '19

An Open Hackathon based in and around JIIT, Noida where participants worked on real-world tech related problems. Constituted 15+ problem statements and ended with approximately 9000+ lines of code on tracks like Web Development, AR/VR, Blockchain, IoT.

JMOC

Top Performing Students

Names are mentioned in random order.

S.No	Name	GitHub Profile

9	Rishabh Gupta	View
10	Anmol Garg	View

We at OSDC hold weekly meetups where members of the community share their weekly learnings and some members present talks on topics of their choice. Meetups are what keep the community glued together and create an environment of fun, learning and networking.

“

HACKNIGHTS

A 5-day *intra-college* event with a twist where participants register individually and are grouped into well-balanced teams by the organizers. The teams then brainstorm and build a project on a given theme, which is then judged by our accomplished alumni.

Most of the folks being night owls, we meet (be it online or offline) and spend an entire night collaborating and hacking on a fun project that is chosen by the community. It's a great motive to get started on long due projects and catch up with the community.

”

Sponsorship Benefits

All the sponsors will:

- Have their logo linked on the OSDHACK 2022 website and promotional material.
- Get access to networking opportunities with the participants as well as the other sponsors.
- Enjoy good relations with the Open Source Developers Community in general.

You may also:

- Provide stickers/schwags to participants.
- Organise your own mini challenges (after discussing them with us) during the entire event.
- Showcase an open source project.
